## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 37-42 are allowed.

The following is an examiner's statement of reasons for allowance:

Claim 37 recites, "a judging unit operable to judge whether or not a first coded picture is a coded picture corresponding to a picture that is to be skipped at a time of trick-play, the first coded picture being added with a first information obtained by coding the command; a coding unit operable to code same contents as the command shown by the first information, as a second information, when said judging unit judges that the first coded picture is the coded picture corresponding to the picture that is to be skipped at the time of trick-play; and a generation unit operable to generate the stream, by adding the second information to a second coded picture that follows the first coded picture in decoding order and that corresponds to a picture which is not to be skipped at the time of the trick-play," which are unique features not disclosed by prior art.

Claim 38 recites, "a judging unit operable to judge whether or not a first coded picture is a coded picture corresponding to a reference B picture that is to be referable to when another picture is decoded, the first coded picture being added with a first information obtained by coding the command; a coding unit operable to code same contents as the command shown by the first information, as a second information, when said judging unit judges that the first coded picture is the coded picture corresponding to the reference B picture; and a generation unit operable to generate the stream, by adding the second information to a second coded picture that follows the first coded

Art Unit: 2621

picture in decoding order and that corresponds to an I picture or a P picture,” which are unique features not disclosed by prior art.

Claim 39 recites, “(i) information obtained by coding a command for managing a buffer that holds a decoded picture as a reference picture, and (ii) a first coded picture that is obtained by coding a specific P picture and that is able to be decoded by selectively referring to an I picture or a P picture that precedes, in decoding order, to the specific P picture, wherein a picture that follows, in the decoding order, the specific picture is defined by not referring to a picture that precedes, in the decoding order, to the specific P picture, and said apparatus comprising: a judging unit operable to judge whether or not a second coded picture is a coded picture corresponding to a picture that is not to be referred to when the first coded picture is decoded, the second coded picture being added with a first information obtained by coding the command; a coding unit operable to code same contents as the command shown by the first information, as a second information, when said judging unit judges that the second coded picture is the coded picture corresponding to the picture that is not to be referred to when the first coded picture is decoded; and a generation unit operable to generate the stream, by adding the second information to a third coded picture, the third coded picture that follows, in the decoding order, the second coded picture and that corresponds to a P picture which is referred to when the first coded picture is decoded,” which are unique features not disclosed by prior art.

Claims 40-42 are allowed for at least the similar features as discussed in claims 37-39 respectively.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
